

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 5

DATE: 6 May 1993

SUBJECT: Case Resolution: American Linen Supply
Minneapolis, Minnesota

FROM: John Gaitskill, Environmental Engineer *JG*
Enforcement Section, Air Enforcement Branch

THRU: Shirley Mitchell, Chief *SM*
Enforcement Section, Air Enforcement Branch

TO: file

This case is a boiler that was installed in July 91 to replace two existing boilers. It is subject to NSPS subpart Dc, but its only requirements are the reporting requirements of subpart A, because it is fired by natural gas. The facility permit expired in May 92. MPCA sent an NOV on 25 Sep 92, citing the permit and NSPS subpart A violations. It required application for a permit and a response from the company explaining why it didn't comply. The company responded on 28 Sep 92 and MPCA acknowledged by letter of 3 Jan 93 that all corrective action was completed. Fereshteh Rahimzadeh of MPCA told me that no further enforcement action is planned and the company received its permit on 5 Jan 93.

I determined this source to be below PSD concern levels for all pollutants. No further enforcement action by USEPA is necessary. This facility should be removed from the SVL by finding of compliance.
